

Batch Normalization

LATEST SUBMISSION GRADE

100%

1. What wrong with the following lines of code:

1 / 1 point

```
1 class NetBatchNorm(nn.Module):
2
3     # Constructor
4     def __init__(self, in_size, n_hidden1, n_hidden2, out_size):
5         super(NetBatchNorm, self).__init__()
6         self.linear1 = nn.Linear(in_size, n_hidden1)
7         self.linear2 = nn.Linear(n_hidden1, n_hidden2)
8         self.linear3 = nn.Linear(n_hidden2, out_size)
9
10
11     # Prediction
12     def forward(self, x):
13         x = self.bn1(torch.sigmoid(self.linear1(x)))
14         x = self.bn2(torch.sigmoid(self.linear2(x)))
15         x = self.linear3(x)
16         return x
```

- ☐ nothing
- ☒ you need to create the BatchNorm objects bn1 and bn2

✓ Correct
correct

2. Consider the following Batch Norm constructor, what is the parameter `n_hidden1` represent

1 / 1 point

```
1 nn.BatchNorm1d(n_hidden1)
```

- ☒ the size of the input
- ☐ the input activation

✓ Correct
correct
